

Exercise 3

Create a function that accepts an array of numbers as an argument. Return the maximum value in the array.

Example:

```
console.log(max([19, 65, 9, 17, -99]));  
> 65  
console.log(max([]));  
> -Infinity
```

```
function max( arr ){  
  //Write your code here  
}
```
