

# Coding Challenge #1: Adding Character Experience

Given a code, can you add experience property to the character? Solve this exercise on your own.

## WE'LL COVER THE FOLLOWING ^

- Problem Statement

## Problem Statement #

Improve our example RPG program to add an experience property named `xp` to the character. Its initial value is 0. *Experience* must appear in character description.

```
var aurora = {  
  name: 'aurora',  
  health: 150,  
  strength: 25,  
  describe(){  
    return `${this.name} has ${this.health} health points and ${this  
      .strength} as strength and ${this.xp} xp`;  
  }  
};
```
