

# Quiz

Let's test your basic understanding of this chapter with a short quiz!

1

Object-oriented programming is a tool used to break a program into segments of objects that can communicate with each other.

2

OOP in JavaScript is exactly the same as OOP in C++, Java and C#.

3

OOP in JavaScript follows prototype-based programming.

4

Prototype-based programming involves making a class that acts as a blueprint with all the properties encapsulated within it.

5

Class-based programming is more flexible and transparent than Prototyped-based programming.

6

Which of the following is not true for the ES6 version?
