

Coding Challenge #2: Accounting Module

This small coding exercise is designed to give you a little practice on Node.js. See if you can solve it on your own!

WE'LL COVER THE FOLLOWING ^

- Problem Statement
- Sample Output:

Problem Statement

Create a `accounting.js` module exporting. Load this module in a `index.js` file and test the two functions. You can use the same accounting class as you created in the previous lessons.

Sample Output:

Owner: Jeff

Balance: 150

index.js

accounting.js

solution.js

```
// Import your module here
```

```
//Tester Code - Don't forget to un-comment it before running your code
/*const myAccount = new Account("Jeff");
myAccount.credit(150);*/
```
