

Custom Use of the Component

Not only have we made it beautiful, we've made it customizable as well.

How Customizable is the **Expandable** Component?

Have a look at what can be done with it!

Reintroducing React

And this doesn't take a lot of code. Have a look.

```
.Expandable-panel {  
  margin: 0;  
  padding: 1em 1.5em;  
  border: 1px solid hsl(216, 94%, 94%);  
  min-height: 150px;  
}
```

Final Look

You can go one step further to test if overriding styles via the `style` prop works as well.

```
.Expandable-panel {  
  margin: 0;  
  padding: 1em 1.5em;  
  border: 1px solid hsl(216, 94%, 94%);  
}
```

```
min-height: 150px;  
}
```

Yay! It works as expected.

We've built a component that other developers can style and use however they want. But what if they want to extend it to add more functionality? We'll look at a design pattern in the next chapter that allows us to do exactly that!
