

# Quiz

Let's test your understanding of the polymorphism.

1

What is the output of the following piece of code?

```
#include <iostream>
using namespace std;

class Base{
public:
    virtual void print() {
        cout << " Base Print";
    }
};

class Derived: public Base{
public:
    void print() {
        cout << "Derived Print" ;
    }
};

int main(){
    Base * bp;
        Derived obj;

    bp = &obj;
    bp->print();
}
```
