

# PBS basic commands

From the user's perspective, the PBS allows to perform three actions:

- **Add** a job to the queue;
- **Remove** a job from the queue; and
- See **where** is your job is in the queue (stat).

PBS commands 

order to use the batch system  
ductively, we need to know  
w to perform three actions:

Add a job to the queue  
Remove a job from the  
queue  
See where our job is in the  
queue

Command	Description
<code>qsub &lt;job-script&gt;</code>	Submit a job (add to queue) Returns a <job-number>
<code>qdel &lt;job-number&gt;</code>	Delete job (remove from The queue)
<code>qstat &lt;job-number&gt;</code>	Monitor jobs
<code>qalter &lt;job-number&gt;</code>	Modifies the attributes of the Job or jobs

Command	Description
<code>qsub &lt;job-script&gt;</code>	Submit a job (add to queue) and returns a <code>&lt;job-number&gt;</code>
<code>qdel &lt;job-number&gt;</code>	Delete job (remove from the queue)

qstat <job-number>
