

Project Challenge: Sign-Up Form Data Handling

In this challenge, we will complete the Sign-Up process by handling the data and adding a new user in the system.

WE'LL COVER THE FOLLOWING

- Problem statement
 - Sign-up form (errors) - expected output
 - Sign-up form (success message) - expected output
- Your implementation

Problem statement

In this challenge, we will build upon the solution of the previous challenge and complete the signup process by handling the data. We will also add a new user to the system by signing them up.

📌 **Note:** You are provided with a **list of dictionaries** called `users` in **line 17** in the application given below. It already contains one user, which is also the admin.

Your tasks in this challenge are:

1. **Validation:** only properly validated data should be processed.
2. **Error handling:** validation errors should be shown to the user on the `signup.html` template.
3. **Insertion of the new user:** the valid data after being submitted should then be used to create a new user that is appended to the `users` list.
4. **Success message:** after successful insertion of the new user, the sign-up page should show a “**successfully signed up**” message.

Sign-up form (errors) - expected output

The screenshot shows a web page with a tan background. In the top left corner, the text "Sign Up" is displayed in a large, bold, black serif font. In the top right corner, there are three blue, underlined links: "Home", "About", and "Sign Up". Below the "Sign Up" heading, the form contains the following elements: a label "Full Name:" followed by a text input field containing "Bob the Speliman"; a label "Email:" followed by a text input field containing "bob@na"; a red error message "Invalid email address." below the email field; a label "Password:" followed by a text input field; a label "Confirm Password:" followed by a text input field; a red error message "Field must be equal to password." below the confirm password field; and a "Sign Up" button at the bottom.

Sign-Up Form (Errors) - Expected Output

Sign-up form (success message) - expected output

The screenshot shows the same web page as before, but with a success message. The "Sign Up" heading and navigation links remain. Below the heading, the text "Successfully signed up" is displayed in a black serif font. The form fields and the "Sign Up" button are no longer visible.

Sign-Up Form (Success Message) - Expected Output

Your implementation

Implement the features described above in the application provided below.

⚠ **Disclaimer:** If you edit the contents of `style.css`, you might notice that the application does not reflect the changes immediately. The reason for this is that the previous version is saved in your browser's cache. To solve this problem:

1. You can hard refresh your browser to clear the cache.

2. Alternatively, you can use inline **CSS** in the **HTML** templates using the **style** attribute. **(Recommended)**

```
"""Flask Application for Paws Rescue Center."""
from flask import Flask, render_template, abort
from forms import SignUpForm

app = Flask(__name__)
app.config['SECRET_KEY'] = 'dfewfew123213rwdsgert34tgfd1234trgf'

"""Information regarding the Pets in the System."""
pets = [
    {"id": 1, "name": "Nelly", "age": "5 weeks", "bio": "I am a tiny kitten rescued b"},
    {"id": 2, "name": "Yuki", "age": "8 months", "bio": "I am a handsome gentle-cat."},
    {"id": 3, "name": "Basker", "age": "1 year", "bio": "I love barking. But, I love"},
