

Coding Challenge #3: Auto Complete

This is an additional coding exercise designed to give an advanced hands-on practice on "Form Validation."

WE'LL COVER THE FOLLOWING ^

- Problem Statement

Problem Statement

In this exercise, you'll have to assist the user in selecting a country. As he enters the country name in an input box, the page shows a list of corresponding countries. Clicking on a suggested country replaces the value in the input box. To keep things simple, only countries starting with a "A" letter are taken into account. Here is the HTML, CSS and JavaScript code that supports the rest of the functionality:

Output

JavaScript

HTML

CSS (SCSS)

Enter a country name:

Console

Clear

Complete this code to implement country autocompletion.

Enter a country name:

- Andorra
- Angola
- Anguilla
- Antarctica
- Antigua-and-Barbuda
