

Exercise 1: Adding Firebase!

In this exercise, we will verify and test the app we have built so far.

WE'LL COVER THE FOLLOWING ^

- Project
- Exercise
- Reading Task

Project

Environment Variables ^

Key:	Value:
REACT_APP_API_KEY	Not Specified...
REACT_APP_AUTH_...	Not Specified...
REACT_APP_DATAB...	Not Specified...
REACT_APP_PROJEC...	Not Specified...
REACT_APP_STORA...	Not Specified...
REACT_APP_MESSA...	Not Specified...

```
import React from 'react';

const Account = () => (
  <div>
    <h1>Account</h1>
  </div>
);

export default Account;
```

At this point, the basic outlook of our React app has been created. Firebase has been imported into the app and we'll connect it to our React components in the future.

Exercise

Exercise

1. Confirm your [source code for this section](#).

Reading Task

1. Read more about the [Firebase Setup for Web Applications](#).
2. Read more about [Firebase's Pricing Plans](#) to know better about the limitations of the free plan.

The next lesson will show us how a Firebase instance created from the Firebase class is used in React.
