## Coding Challenge #2: Character Inventory

In this coding exercise, you will extend the Character class with new functionalities. The requirements are listed below.

## WE'LL COVER THE FOLLOWING ^

- Problem Statment
- Coding Exercise

## Problem Statment #

Improve the example RPG to add character inventory management according to the following rules:

- A character's inventory contains a number of gold and a number of keys
- $\bullet\,$  Each character begins with 10 gold and 1 key
- The character description must show the inventory state
- When a character slays another character, the victim's inventory goes to its vanquisher

## Coding Exercise #

```
target. Hearth -- damage,
      if (target.health > 0) {
        console.log(`${target.name} has ${target.health} health points left`);
      } else {
       target.health = 0;
        const bonusXP = 10;
        console.log(
          `${this
            .name} eliminated ${target.name} and wins ${bonusXP} experience points`
        );
       this.xp += bonusXP;
      }
   } else {
     console.log(`${this.name} can't attack (they've been eliminated)`);
   }
 }
 // Return the character description
 describe() {
   return `${this.name} has ${this.health} health points, ${this
      .strength\ as strength and ${this.xp\} XP points`;
 }
}
```
