- Exercise

In this exercise, we will implement a class that returns an std::shared_ptr.

Problem statement

Implement the class `ShareMe` so the objects of type `ShareMe` return an `std::shared_ptr` to themselves.

```cpp
#include <iostream>
#include <memory>

class ShareMe: public std::enable_shared_from_this<ShareMe>{
public:
  // write getShareed method here
};
int main() {
  // call objects here
  return 0;
}
```

The solution to this exercise is in the next lesson.
