Bug 1: Selectable Tooltip

Time to address the bugs in our implementation! In this lesson, we will try to see how we can make our tooltip not selectable.
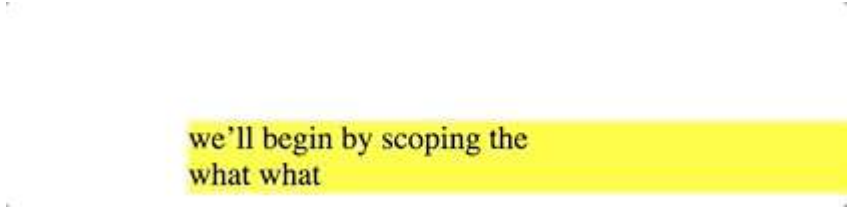

WE'LL COVER THE FOLLOWING ∧

- Tooltip itself is selectable

We've made it 80% of the way in both the functionality and styling, leaving plentiful bugs to be discovered. Let's go through them one by one and patch up.

Tooltip itself is selectable

The tooltip is positioned close to the text, and so if we drag and select, we may end up accidentally selecting over the tooltip.

This is just one of those cases where you either know something exists or in Google, it is going to be something like, "make unselectable." Either way, there's simply a CSS property that renders this bug an easy fix.

```
user-select: none;
```

Output

JavaScript

HTML

CSS (SCSS)

we'll begin by scoping the
what what

In the next lesson, we will take a look at another bug regarding tooltips being displayed by clicking.
