Quiz

This lesson covers multiple choice questions related to traversing Document Object Model.

1   What does `querySelectorAll()` function returns?

2   What does the `querySelector()` function returns when there is no associated element found?

3 The difference between `querySelectorAll()` and `querySelector()` is that `querySelector` returns the last element, where as `querySelectorAll()` returns all the elements associated to the class or identifier. Is this statement True or False?

4 The attributes of the following are directly accessible as properties except:

5 Given this HTML code:

```
<h1>Favourite seasons</h1>
```

```
<p>Here's the list of my favorite seasons on Netflix</p>
<div id="fav">
    <ul class="seasons" id="favseasons">
        <li class="netflix">Peaky Blinders</li>
        <li>House of Cards</li>
        <li>Narcos</li>
        <li>Dexter</li>
    </ul>
```

Can you guess what will be the output of this JavaScript this statement `console.log(classes[1]);` on the code written above?

6

When is it convenient to use the `innerHTML()` function?
