# Quiz

This lesson covers multiple choice questions related to querying a web server.

1 HTTP requests sent to a web server need to be synchronous to prevent blocking the client application while waiting for the server's response.

2 The `XMLHttpRequest()` method is better than `fetch()` method as the go-to way of creating an asynchronous request.

3 Which of the following could not be a possible state for *promise*?

4 When is `catch()` method called in JavaScript?

5 The difference between `XMLHttpRequest` and `fetch()` is that `XMLHttpRequest` uses promises. Is this statement True or False?

6 Which of the following method is used to convert JSON data into valuable objects?
