Median Paycheck: Exercise

Write a point-free function to find the median monthly paycheck above $100,000.

I hope this one looks familiar–it's from our higher-order functions section!

Given a list of employee salaries, find the median monthly paycheck *above $100,000*.

Usage

```
const medianPaycheck = getMedianPaycheck(employees) // $141,000
```

The median's $141,000?! Must be Google or Facebook employees...oh, by the way, your solution must be point-free. ;)

index.js

employees.js

```
import {} from 'ramda';
import employees from './employees';

const getMedianPaycheck = () => {};
```
