Coding Challenge #3: Playing with Dates

This small coding exercise is designed to give you a little practice on Node.js. See if you can solve it on your own!

Problem Statement

The `npm` package moment is very popular for managing dates and times. Load this package and use it to:

- Display the current date

- Compute the number of years since 1976, November 26th

Sample Output:

Current Date = Monday, November 12th 2018

No. of years since 1976-11-26 = 42 years ago

```
index.js
solution.js
```

```javascript
// Load the moment package as a module

var current_date = '';
var num_of_years = 0;

//Write - Your - Code
```

Use the moment documentation to discover how to use this package.
