Verify: Setup

In this lesson, you can test and see the project and its files that have been set up until now.

You can check the entire project that we've set up so far from the previous lesson by running the project given below. You can also run the app on your browser by using the link given at the bottom of the widget.

Project

Environment Variables		^
Key:	**Value:**	
REACT_APP_API_KEY	Not Specified...	
REACT_APP_AUTH_...	Not Specified...	
REACT_APP_DATAB...	Not Specified...	
REACT_APP_PROJEC...	Not Specified...	
REACT_APP_STORA...	Not Specified...	
REACT_APP_MESSA...	Not Specified...	

```
import React from 'react';

const Account = () => (
  <div>
    <h1>Account</h1>
  </div>
);

export default Account;
```

Exercise

1. Configure your own for this section.

1. Confirm your source code for this section.

2. Familiarize yourself with the folder structure of the project.

In the next lesson, we will be implementing **routing** to split the application into multiple URLs.
