Quiz 6

Question # 1

Q Why adding or dropping a column from a very large table may be a bad idea?

Question # 2

Q Consider the following table with only two rows:

Table A

Name
Robert De Niro
NULL

Will the INNER JOIN and LEFT JOIN of the above table with itself give the same result?

Question # 3

Q

Consider two tables A and B.

```
SELECT * FROM
A RIGHT JOIN B
ON A.col = B.col;
```

and,

```
SELECT * FROM
B LEFT JOIN A
ON A.col = B.col;
```

Will the output of the above two be different barring the order in which the columns appear in a row?

Question # 4

Q

Consider the query:

```
REPLACE INTO Actors(ActorId, FirstName, SecondName)
VALUES(13, 'Will', 'Smith');
```

A trigger *xyz* associated with Actors table is fired when **REPLACE** is executed.

Question # 5

Q

Consider the query:

```
TRUNCATE TABLE Actors;
```

A trigger *xyz* associated with Actors table is fired when **TRUNCATE** is executed.

```
TRUNCATE TABLE Actors;
```

A trigger *xyz* associated with Actors table is fired when **TRUNCATE** is executed.
