Installation

This lesson shows how to install the css-theming package.

Installing `css-theming`

The `css-theming` package is released as an npm package.

`npm` `v1.2.0`

Type the following in your favorite terminal to install it:

```
$ npm i css-theming --save
```

Modules

There are both JavaScript modules (typescript type definitions available) and SCSS src files after you install the package.

JS

You use the JavaScript modules the usual way:

```
import { initializeTheming, ... } from 'css-theming';
```

SCSS

The SCSS src files are at `css-theming/src/scss/`:

```scss
// Change "../" depending on where your file is.
@import '../node_modules/css-theming/src/scss/css-theming';
```

> **Note:** Check the different samples in the GitHub repo to see this up close.

After you've successfully installed `css-theming`, move to the next lesson to begin the setup.
